3. Asset Mix and Investment Income

ASSET MIX

Funds held in trust by the World Bank (as the Trustee) are maintained in a commingled investment portfolio (the "Pool") for all trust funds administered by the World Bank.

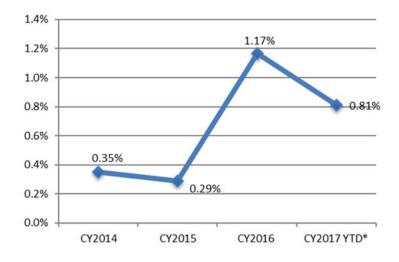

On July 1, 2015, the World Bank formally adopted the Conditional Value-at-Risk (CVaR) measure as the risk constraint in the management of trust funds. Funds are managed such that the expected maximum loss, as measured by the CVaR, at the portfolio's investment horizon, is not to exceed 1% with 99% confidence.

The negative position in swaps is primarily due to changes in foreign currency exchange (FX) rates in cross currency basis swaps. Such swap instruments are used to implement currency hedges on bond positions within the portfolio. These hedges remain in place.

INVESTMENT INCOME

The GPEF funds are invested in a short and medium horizon portfolio of the World Bank's trust fund investment pool. This portfolio comprises investments in government bonds and money markets with an investment horizon of up to three years. The GPEF Trust Fund liquid portfolio (which totaled approximately USD 338.3 million at end- June 2017) has returned 0.81% through the calendar year to June 30, 2017 and earned approximately USD 20.4 million in investment income since inception.
