3. Asset Mix and Investment Income

ASSET MIX

The undisbursed cash balance of the Adaptation Fund Trust Fund is maintained in a commingled investment portfolio (“Pool”) for all trust funds managed by IBRD. Funds are managed such that the expected maximum loss, as measured by the CVaR, in the worst 1% of cases will not exceed 0.25% at the portfolio’s investment horizon.

The portfolio allocation by asset class has the largest allocations to government securities and money-market instruments.

Note: The negative position in swaps is primarily due to changes in foreign currency exchange (FX) rates in cross currency basis swaps. Such swap instruments are used to implement currency hedges on bond positions within the portfolio.

INVESTMENT RETURNS

The portfolio’s investment performance continues to be modest as fixed income yields tested new lows again in September 2016. The largest contributor to investment performance over the quarter, as well as over FY16, was medium-term sovereign bonds in the United States.
