Introduction

The Pilot Auction Facility (PAF) was initiated as a result of a report from the Methane Finance Study Group¹, an international group of experts convened at the request of the G8. It is an innovative climate finance mechanism that pioneers the use of auctions to allocate scarce public resources and leverage private sector financing to stimulate investment in projects that reduce greenhouse gas emissions at low cost by piloting the auction of tradeable put options which would guarantee a floor price for qualifying emission credits.

The PAF Trust Fund was established in December 2014. This report covers the financial status of the PAF Trust Fund, and is produced by the Trustee in accordance with the Trustee's role in the PAF Framework, as set forth under Section E, which states:

“The Trustee will prepare annual financial reports of the PAF Trust Fund.”

In addition, Section 6 of the Standard Provisions in the Contribution Agreement/Arrangement states as follows:

“The Trustee will maintain separate records and ledger accounts in respect of the funds deposited in the Trust Fund and transfers made therefrom. The Trustee will report to the Participants Committee annually on the financial status of the Trust Fund including information on the status of Contributions, investment income, commitments, transfers and funds available for allocation of funding by the Participants Committee.”

3. Asset Mix and Investment Income

ASSET MIX

Funds held in trust by the World Bank (as the Trustee) are maintained in a commingled investment portfolio (the “Pool”) for all trust funds administered by the World Bank. The World Bank uses the Conditional Value-at-Risk (CVaR) measure as the risk constraint in the management of trust funds. Funds are managed such that the expected maximum loss, as measured by the CVaR, at the portfolio’s investment horizon, is not to exceed 1% with 99% confidence.

The portfolio allocation by asset class has the largest allocations to government securities and money market instruments.

Note: The negative position in swaps was primarily due to changes in foreign currency exchange (FX) rates in cross currency basis swaps. Such swap instruments are used to implement currency hedges on bond positions within the portfolio. These hedges remain in place. Mortgage Backed Securities allocation includes To-Be Announced (TBA) contracts for which only Mark-To-Market (MTM) is used to calculate the value of the position which, as a result, could be negative.

Covered Bonds are securities issued by banks and mortgage institutions which provide additional protective layer to the investors wherein the investor has recourse to the issuer and collateral. In the December 2017 report, Covered Bonds were clubbed under Govt Securities.

INVESTMENT RETURNS

The PAF Trust Fund balances are invested in accordance with the investment strategy established for all trust funds administered by the World Bank. They are invested in a short term fixed income portfolio with an investment horizon of one year. The PAF Trust Fund portfolio has earned approximately USD 2.24 million in investment income at December 2018.
