### 3. Asset Mix and Investment Income

#### ASSET MIX

Funds held in trust by the World Bank (as the Trustee) are maintained in a commingled investment portfolio (the “Pool”) for all trust funds administered by the World Bank. As of July 1, 2015, the World Bank adopted the Conditional Value-at-Risk (CVaR) measure as the risk constraint in the management of trust funds. Funds are managed such that the expected maximum loss, as measured by the CVaR, at the portfolio’s investment horizon, is not to exceed 1% with 99% confidence.

The portfolio allocation by asset class has the largest allocations to government securities and cash and cash equivalents.

\* The negative position in swaps is primarily due to changes in foreign currency exchange (FX) rates in cross currency basis swaps. Such swap instruments are used to implement currency hedges on bond positions within the portfolio.

\*\* Mortgage Backed Securities allocation included ‘To be Announced’ contracts, for which Mark-to-Market was used to calculate the value of the position, which resulted to negative returns.

#### INVESTMENT RETURNS

The PEF funds are invested in accordance with the investment strategy established for the trust funds administered by the World Bank. The PEF funds are invested in a short term fixed income portfolio with an investment horizon of one year. The PEF Trust Fund portfolio, with a cash balance of USD 67.29 million at end-June 2019, has earned approximately USD 3.22 million in investment income since inception.
